2
Healthcare Practitioner's Computer System
(Input / Display / Storage/ Local Network)
Access to Central Health Care Information Database
1. Communication with Central Database System
2. Send and Receive e-mail
3. Authenticate a user to local system and Central Database System using Biometric unit
4. Read Medical Information from Smart Card
5. Write Medical Report to Smart Card
6. Write Prescription to Smart Card
7. Write Electronic Signature to Smart Card
8. Medical Prescription Assistance for medication evaluation
9. Cooperate with Central Database System to synchronize Smart Card and Central Database
10.Prints a prescription (if required) using color printer

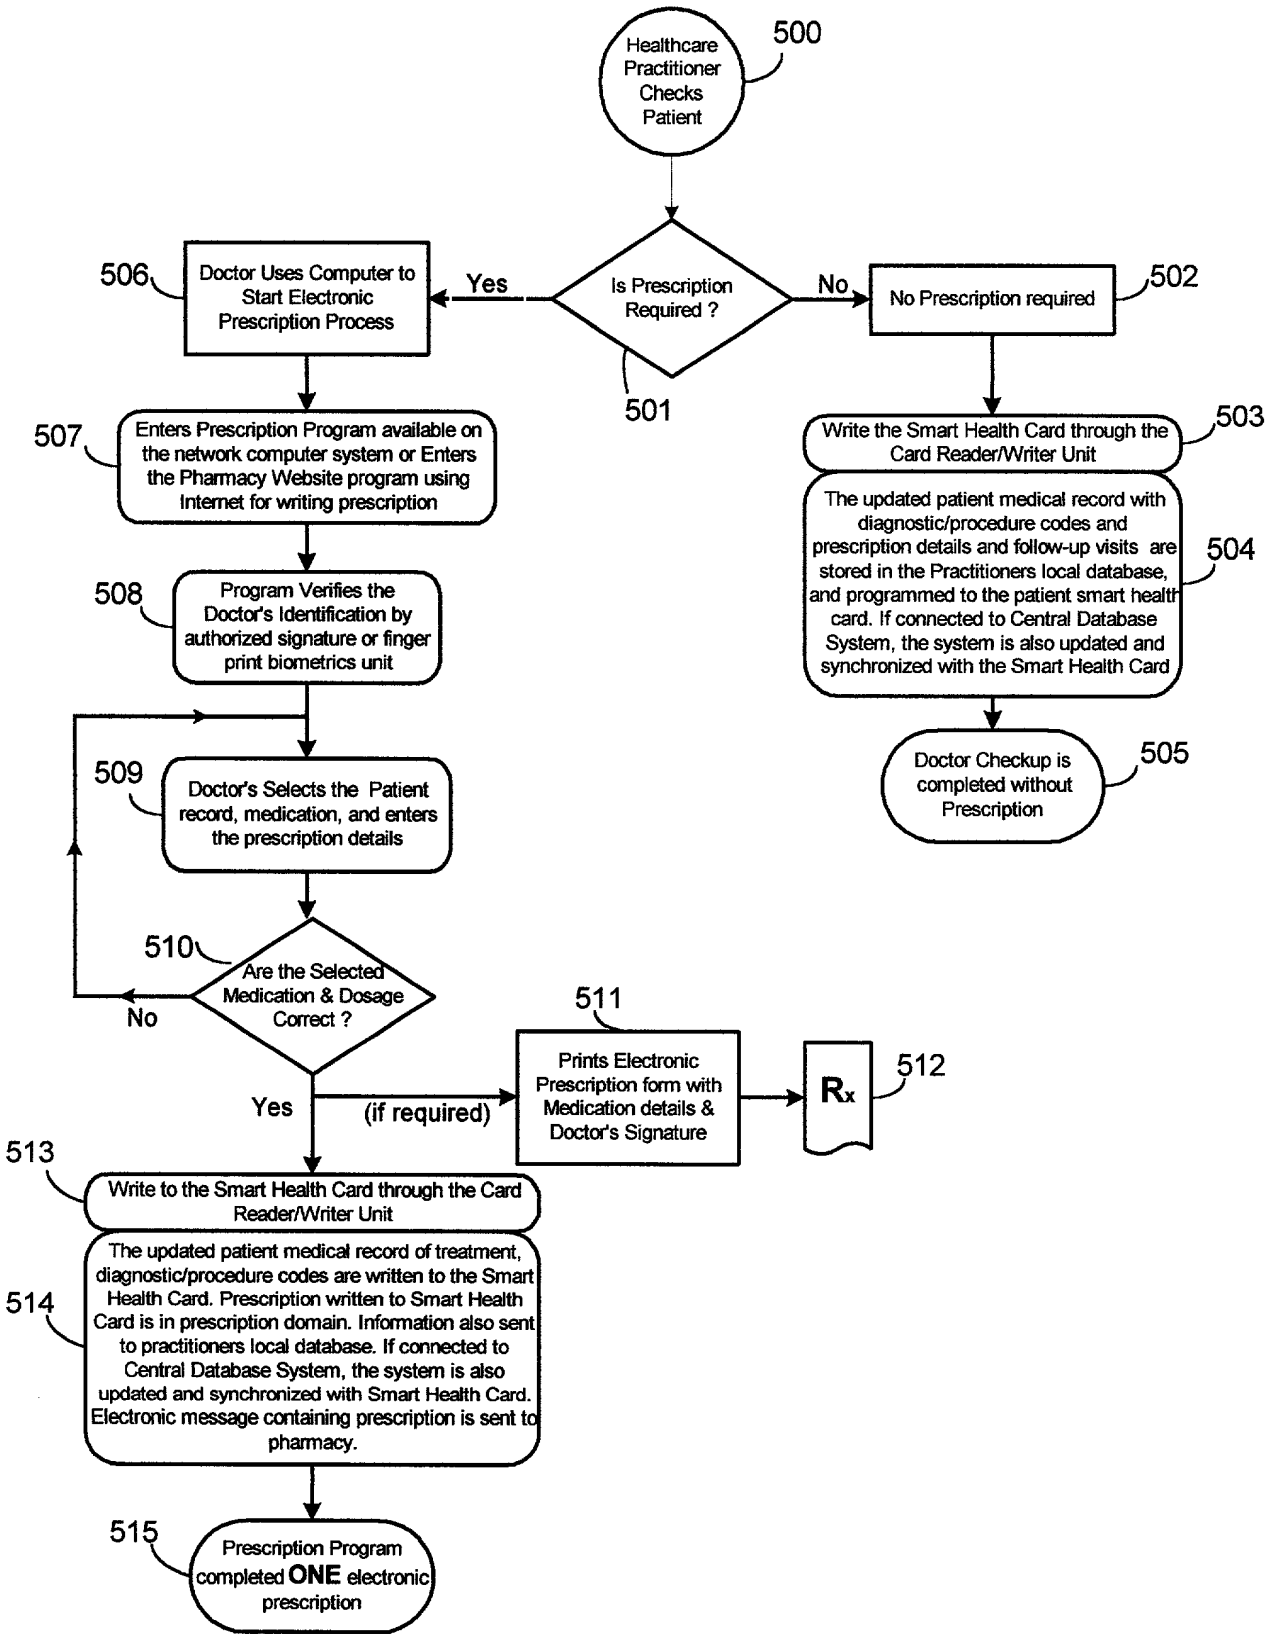
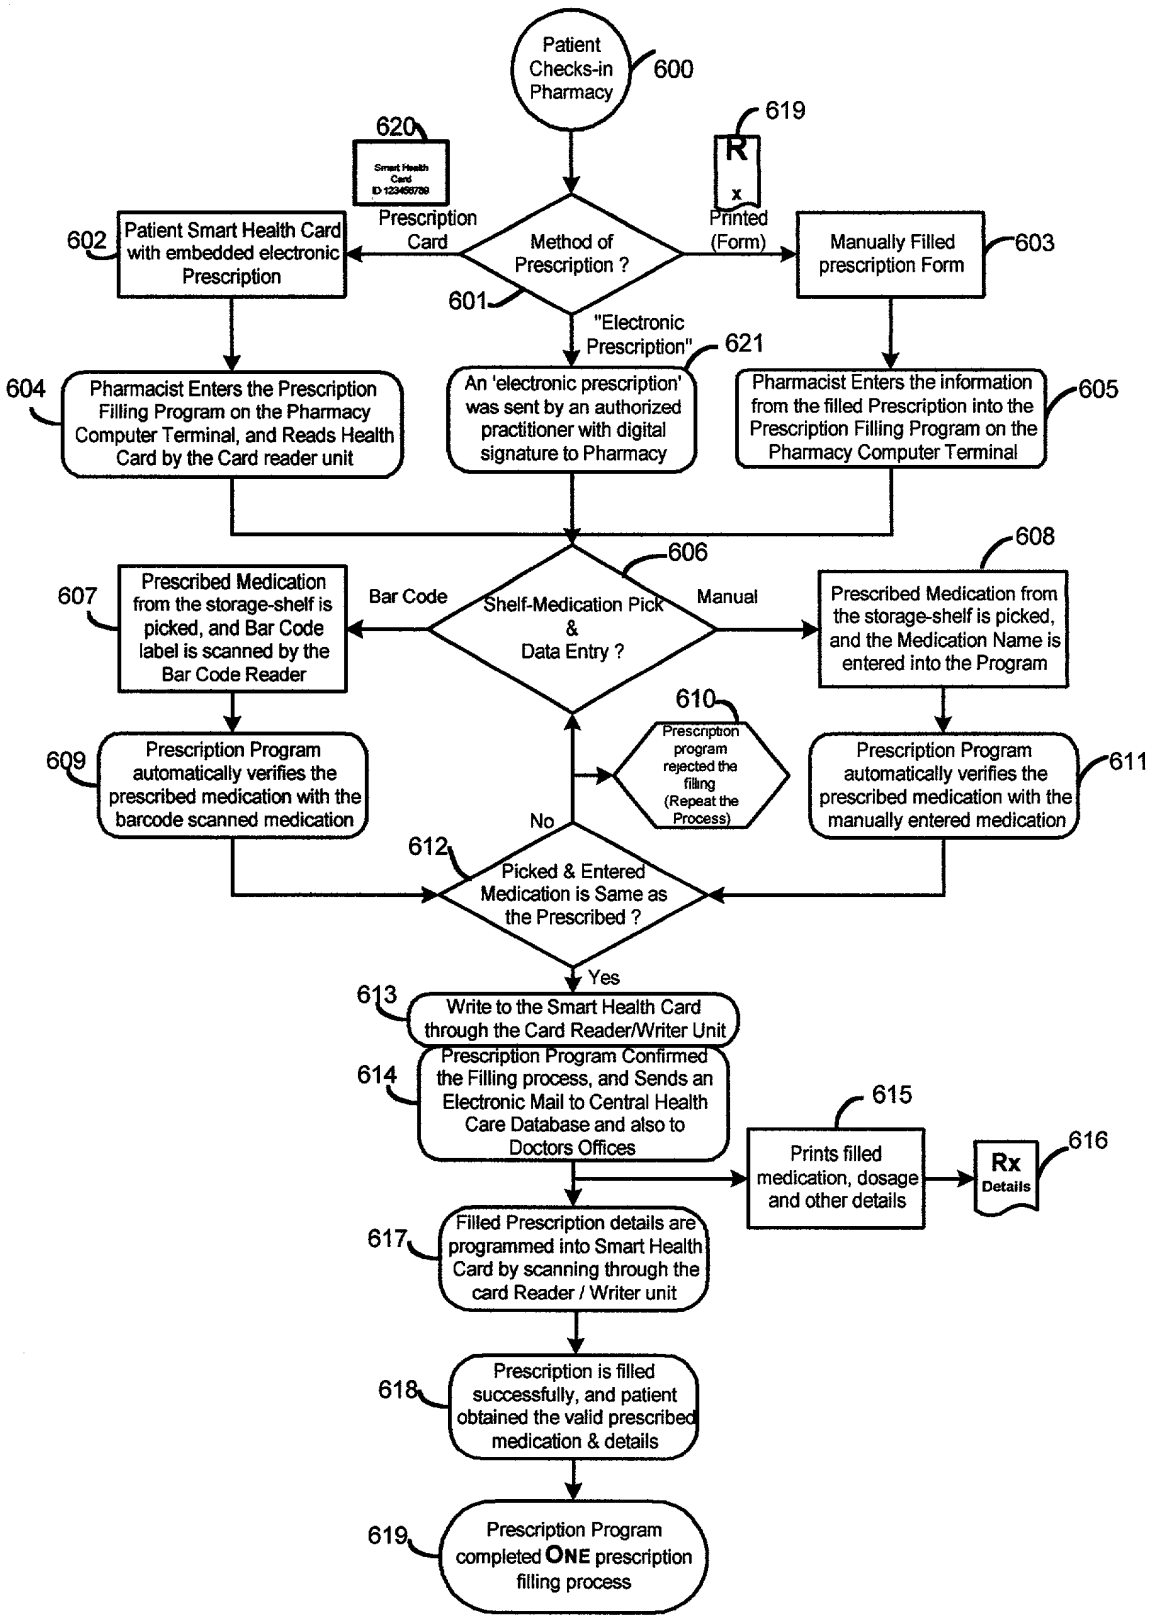
FIG. 4



Healthcare Practitioner Checks Patient
500
Is Prescription Required ?
501
Yes
No
506
Doctor Uses Computer to Start Electronic Prescription Process
No Prescription required
502
507
Enters Prescription Program available on the network computer system or Enters the Pharmacy Website program using Internet for writing prescription
Write the Smart Health Card through the Card Reader/Writer Unit
503
The updated patient medical record with diagnostic/procedure codes and prescription details and follow-up visits are stored in the Practitioners local database, and programmed to the patient smart health card. If connected to Central Database System, the system is also updated and synchronized with the Smart Health Card
504
508
Program Verifies the Doctor's Identification by authorized signature or finger print biometrics unit
Doctor Checkup is completed without Prescription
505
509
Doctor's Selects the Patient record, medication, and enters the prescription details
510
Are the Selected Medication & Dosage Correct ?
No
Yes
511
Prints Electronic Prescription form with Medication details & Doctor's Signature
(if required)
Rx
512
513
Write to the Smart Health Card through the Card Reader/Writer Unit
514
The updated patient medical record of treatment, diagnostic/procedure codes are written to the Smart Health Card. Prescription written to Smart Health Card is in prescription domain. Information also sent to practitioners local database. If connected to Central Database System, the system is also updated and synchronized with Smart Health Card. Electronic message containing prescription is sent to pharmacy.
515
Prescription Program completed ONE electronic prescription

FIG. 5



Patient Checks-in Pharmacy

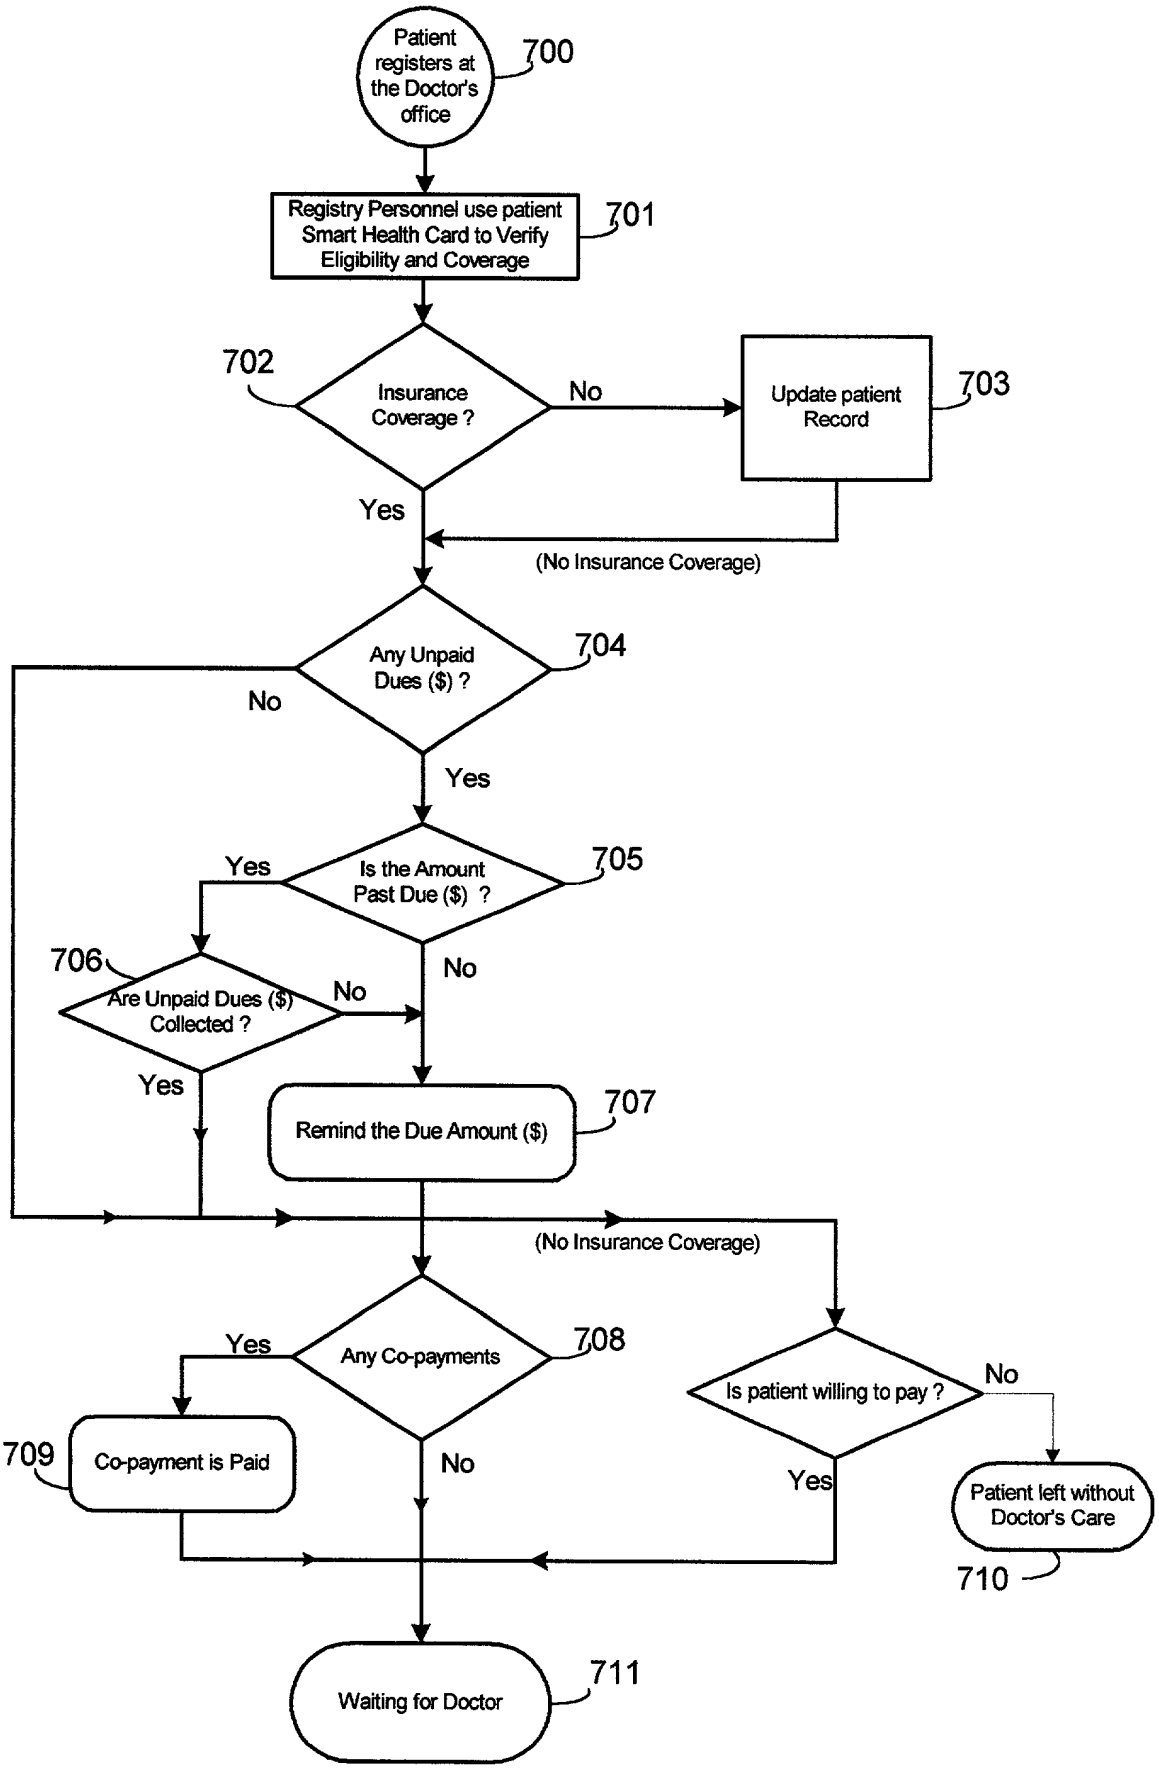
x
Prescription Card
Method of Prescription ?
Printed (Form)
602
Patient Smart Health Card with embedded electronic Prescription
601
Manually Filled prescription Form
603
"Electronic Prescription"
621
604
Pharmacist Enters the Prescription Filling Program on the Pharmacy Computer Terminal, and Reads Health Card by the Card reader unit
An 'electronic prescription' was sent by an authorized practitioner with digital signature to Pharmacy
Pharmacist Enters the information from the filled Prescription into the Prescription Filling Program on the Pharmacy Computer Terminal
605
606
608
607
Prescribed Medication from the storage-shelf is picked, and Bar Code label is scanned by the Bar Code Reader
Bar Code
Shelf-Medication Pick & Data Entry ?
Manual
Prescribed Medication from the storage-shelf is picked, and the Medication Name is entered into the Program
610
609
Prescription Program automatically verifies the prescribed medication with the barcode scanned medication
Prescription program rejected the filling (Repeat the Process)
Prescription Program automatically verifies the prescribed medication with the manually entered medication
611
No
612
Picked & Entered Medication is Same as the Prescribed ?
Yes
613
Write to the Smart Health Card through the Card Reader/Writer Unit
614
Prescription Program Confirmed the Filling process, and Sends an Electronic Mail to Central Health Care Database and also to Doctors Offices
615
Prints filled medication, dosage and other details
Rx Details
616
617
Filled Prescription details are programmed into Smart Health Card by scanning through the card Reader / Writer unit
618
Prescription is filled successfully, and patient obtained the valid prescribed medication & details
619
Prescription Program completed ONE prescription filling process

FIG. 6



Patient registers at the Doctor's office
700
Registry Personnel use patient Smart Health Card to Verify Eligibility and Coverage
701
Insurance Coverage ?
702
No
Update patient Record
703
Yes
(No Insurance Coverage)
Any Unpaid Dues ($) ?
704
No
Yes
Yes
Is the Amount Past Due ($) ?
705
706
Are Unpaid Dues ($) Collected ?
No
Yes
No
Remind the Due Amount ($)
707
(No Insurance Coverage)
Yes
Any Co-payments
708
No
Is patient willing to pay ?
No
Yes
709
Co-payment is Paid
Patient left without Doctor's Care
710
Waiting for Doctor
711
